

Patient:	Gender: <b>f</b>	Date of birth: <b>xx.xx.1961</b>	Status: <b>Final test result</b>
Receipt: <b>14.10.2020</b>	Outcome: <b>29.10.2020</b>	Order number:	Product code: <b>06800xxxx</b>

## Your test result

Determination	Result	Limit value	Unit
Delta 44/42 Ca Urine	-0,19	> 0,2	‰
Calcium i.U.	1,28	< 5,1	mmol/l

### Summary of the results:

Your test result is clearly below the threshold for osteoporosis and also well below the age-appropriate value. It can be assumed that you have osteoporosis. It can be expected that the hormone therapy will have a positive effect and counteract the calcium loss/bone loss. It is recommended to repeat the test timely (within the next few weeks) to check the effect of the hormone therapy.

### Your individual evaluation:

Indication of increased calcium depletion and a possible osteoporosis.

Your urine calcium level is decreased. This is an indication of increased calcium depletion and possible osteoporosis. The loss of calcium is accompanied by a loss of bone substance (osteoporosis). We strongly recommend that you discuss this result with your doctor. The OsteoTest also gives your doctor the opportunity to ensure the success of your personal therapy.
